Rishabh Jain

Project Manager | National Digital Platforms and Applied AI

New Delhi, India (open to relocation and remote) | rishabh.jain@outlook.in | linkedin.com/in/notrishabhjain | notrishabhjain.github.io

PROFESSIONAL SUMMARY

Project Manager with 11 years of experience delivering digital transformation for Government of India ministries and global enterprise clients, with a software engineering and blockchain architecture background. Owns delivery from requirements and change control through user acceptance testing, security audit, go-live and operations. Delivered a national pay commission demand management platform from engagement start to live production in about one month, led a green hydrogen certification portal to a public launch by a Union Minister, and turned a loss-making wind-energy application portfolio to profit. Defines Applied AI scope with advisory-only guardrails and runs an AI-assisted delivery lifecycle in which a named person is accountable for every output. Seeking Applied AI Project Manager, Product Manager and Programme Manager roles.

CORE SKILLS

Programme and Delivery Management: Agile, Scrum, Waterfall, hybrid delivery, sprint planning, PMO governance, RACI, risk and dependency management, formal change control, UAT management, defect governance, vendor management, stakeholder and escalation management, P&L ownership

Applied AI and Product: AI product delivery, AI scope definition and governance, AI-assisted software delivery (Claude), product ownership, requirements (BRD, FRS, SRS), workflow and state-machine design, requirements traceability, RFP, RFQ and DPR authorship

Technology: MERN stack, React, Node.js, PostgreSQL, MongoDB, REST APIs, GitHub Actions CI/CD, AWS, NIC MeghRaj, Hyperledger Fabric, Ethereum, blockchain architecture

Government Platforms and Compliance: Parichay SSO, Aadhaar eSign, DSC, GIGW, UX4G, WCAG 2.1 AA, CERT-In empanelled VAPT and SAST audits, STQC, NICSI

Tools: Jira, Confluence, MS Project, OpenForge, Figma, GitHub

PROFESSIONAL EXPERIENCE

Manager, Digital Transformation - BDO India

New Delhi | January 2026 - Present | Client: National e-Governance Division (NeGD), Ministry of Electronics and IT

- Project Manager for two live Government of India platforms, leading a team of 10 on the Green Hydrogen Certification portal and a team of 8 on the 8th Central Pay Commission Demand Management System.
- 8th CPC Demand Management System: delivered 11 modules from engagement start on 23 July 2026 to go-live on 24 August 2026 against a statutory tenure that could not move. Ran delivery as parallel streams, cutting a five-sprint plan to two.
- Migrated the Commission's Excel data from 14 offices with no common structure into a governed workflow platform, and coordinated four bodies with no common reporting line through go-live and an external security audit.
- Platform now holds about 21,000 demands with about 200 active users and about 1,000 demands handled per day, up from about 50. Parichay SSO is live. Designed for roughly ten times the volume held today.
- Green Hydrogen Certification portal (MNRE): led Phase 1 from January 2026 to public launch by the Minister on 1 July 2026. Delivered 4 certificate types across 11 modules on an append-only registry. Live with 20+ applications, 8 certificates issued, 8 producers, 3 ACV agencies and 4 Technical Committee members.
- Ran two UAT rounds with 262 defects logged and triaged, and a security programme combining an internal review (51 findings, 48 closed, 3 verified manually with residual risk signed by the CTO) with one external CERT-In empanelled audit. All external findings were closed within three days, and clearance followed on 30 June 2026.
- Operate formal change control after go-live: impact assessment, BRD update and client approval. Delivered a four-change release (date-based exceptions, payment-gateway exemption, Super Admin credential creation, dashboard view) in about three days.
- Scoped the 8th CPC AI examination layer (duplicate detection, anomaly detection, evidence matching, source retrieval) as advisory-only, and led the Phase 2 request for quotation for GHCI (six modules), now in procurement.
- Run an AI-assisted delivery lifecycle with Claude across discovery, requirements, planning, testing and reporting. All code is written and owned by developers, and every AI output has a named accountable person.

Project Manager, Product Owner and Scrum Master - Infosys

Pune | November 2024 - January 2026 | Client: global wind-energy manufacturer (United States)

- Owned P&L, delivery, operations, product and people for an application organisation of about 35 supporting about 55 applications for wind-energy hardware with 24x7 uptime obligations.

- Turned the unit from a complete loss to about 15% profit within six months, and to about 25% profit since. Standardised SOPs, moved repetitive work to a new L1.5 support tier and right-sized a team running at about twice contractual staffing, in that order.
- Maintained 99.9% SLA compliance. Cut mean time to resolution from four days to under twelve hours, with 70-80% automation across the portfolio.
- Split support, enhancement and environment-change work into separate commitments, and converted absorbed out-of-scope requests into separately scoped new business.
- Introduced AI into production ticket routing and closure in controlled stages (shadow mode, a six-hour window, full-day operation) with no false positives detected.
- Defined RACI and escalation governance across multiple vendors and the client, and led P1 incident response for round-the-clock services.

Senior Consultant, Government Consulting - EY India

Delhi | April 2022 - November 2024

- CRCS Portal (Ministry of Cooperation): moved a paper-based national registry of about 1,800 multi-state cooperative societies and 40 million members to a live platform. Led business process re-engineering and authored the DPR and RFP, then oversaw vendor delivery on the ministry side.
- Proposed amendments to the MSCS Act to recognise electronic notice and non-physical signatures. The amendments were tabled and enacted in about six months. Application processing time fell from 15-20 days to about 4 days. The platform was later extended to Sahara refund processing.
- Built a national website benchmarking framework with IIT Delhi and IIM Indore covering 150+ parameters, including a comparison of G20 government websites, now used by NeSDA to rank and improve government websites.
- Led the revamp of 80+ government department websites onto a common framework with STQC certification, security audits and a common information architecture.
- National Portal of India v2.2: authored the DPR and RFP, onboarded the vendor and started development. IVFRT 2.0 (Bureau of Immigration): led process engineering, flow design, testing and approvals across ICP, India Post, land ports and seaports.
- Ran PMO governance with risk logs, vendor performance monitoring and milestone dashboards, and worked directly with Secretaries and Additional Secretaries on approvals and scope decisions.

Software Engineering Lead (Blockchain Architect) - UST Global, for EYGDS

Noida | June 2021 - April 2022

- Single-handedly built Skillchain, a blockchain platform recording employee skills and qualifications for background verification, with NFT-backed certifications. Taken to a unit-wide pilot for 2,500+ employees.

Blockchain and Backend Developer - ValueCoders

Noida | June 2020 - June 2021

- Built secure, scalable backend architectures across three regulated domains in twelve months: a cryptocurrency exchange, a document management system and a civil registry platform.

IT Analyst - Tata Consultancy Services

Gurugram | October 2015 - May 2020

- Built automation on a mainframe for a UK client, including automated reporting that saved 20+ man-hours weekly.
- Implemented multi-node Hyperledger Fabric and Ethereum proofs of concept for banking and financial services clients, some reaching production. Optimised dispute resolution workflows and reduced reported defects by 40%.
- Delivered for clients in the United States, United Kingdom and Japan.

EDUCATION

Post Graduate Diploma in Management (PGDM) - IMT CDL, Ghaziabad, 2023

Bachelor of Technology, Computer Science - UPTU, Lucknow, 2015

CERTIFICATIONS

Certified Scrum Master | Google Project Management Professional Certificate | Blockchain Specialization (Coursera) | Blockchain for Business (edX) | Blockchain Architecture and Use Cases (NPTEL)
